

ABSTRACT

A method for recovering a liquid medium, comprising gas to be compulsorily contacted with the liquid medium to
5 vaporize the liquid medium, and condensing the vaporized medium, and a system for recovering a liquid medium.
Further, the present invention is directed to a system for recovering a liquid medium, wherein the system comprises: a vaporizing means for bringing gas into contact with a mixed
10 liquid comprising a liquid medium and a nonvolatile substance to vaporize the liquid medium; a condensing-separating means for cooling the gas and the vaporized medium fed from the vaporizing means to separate the condensed medium from the separated gas; and a gas feeding
15 means for feeding the separated gas as the gas to the vaporizing means.
